How the Lead Machine gets its information

Every step from the public record to your phone call, for both pages. The data refreshes itself every morning; the cuts, estimates and scores run in your browser each time you open the page, using your own settings.

Automatic, every day · Kept by hand · Filter or score · Your action

Westchester County

Built from County Planning Board referrals, which arrive months before a building permit.

Three county sources feed one daily pull. Two hand-kept files add teams and town phones. Everything is merged and published each morning, then estimated, cut and scored in your browser.

WHY COUNTY REFERRALS

Every town must send site plans with 5,000+ sq ft of floor area or 10,000+ sq ft of land disturbance to the County Planning Board, so one feed covers all 45 municipalities.

WHAT'S NOT AUTOMATIC

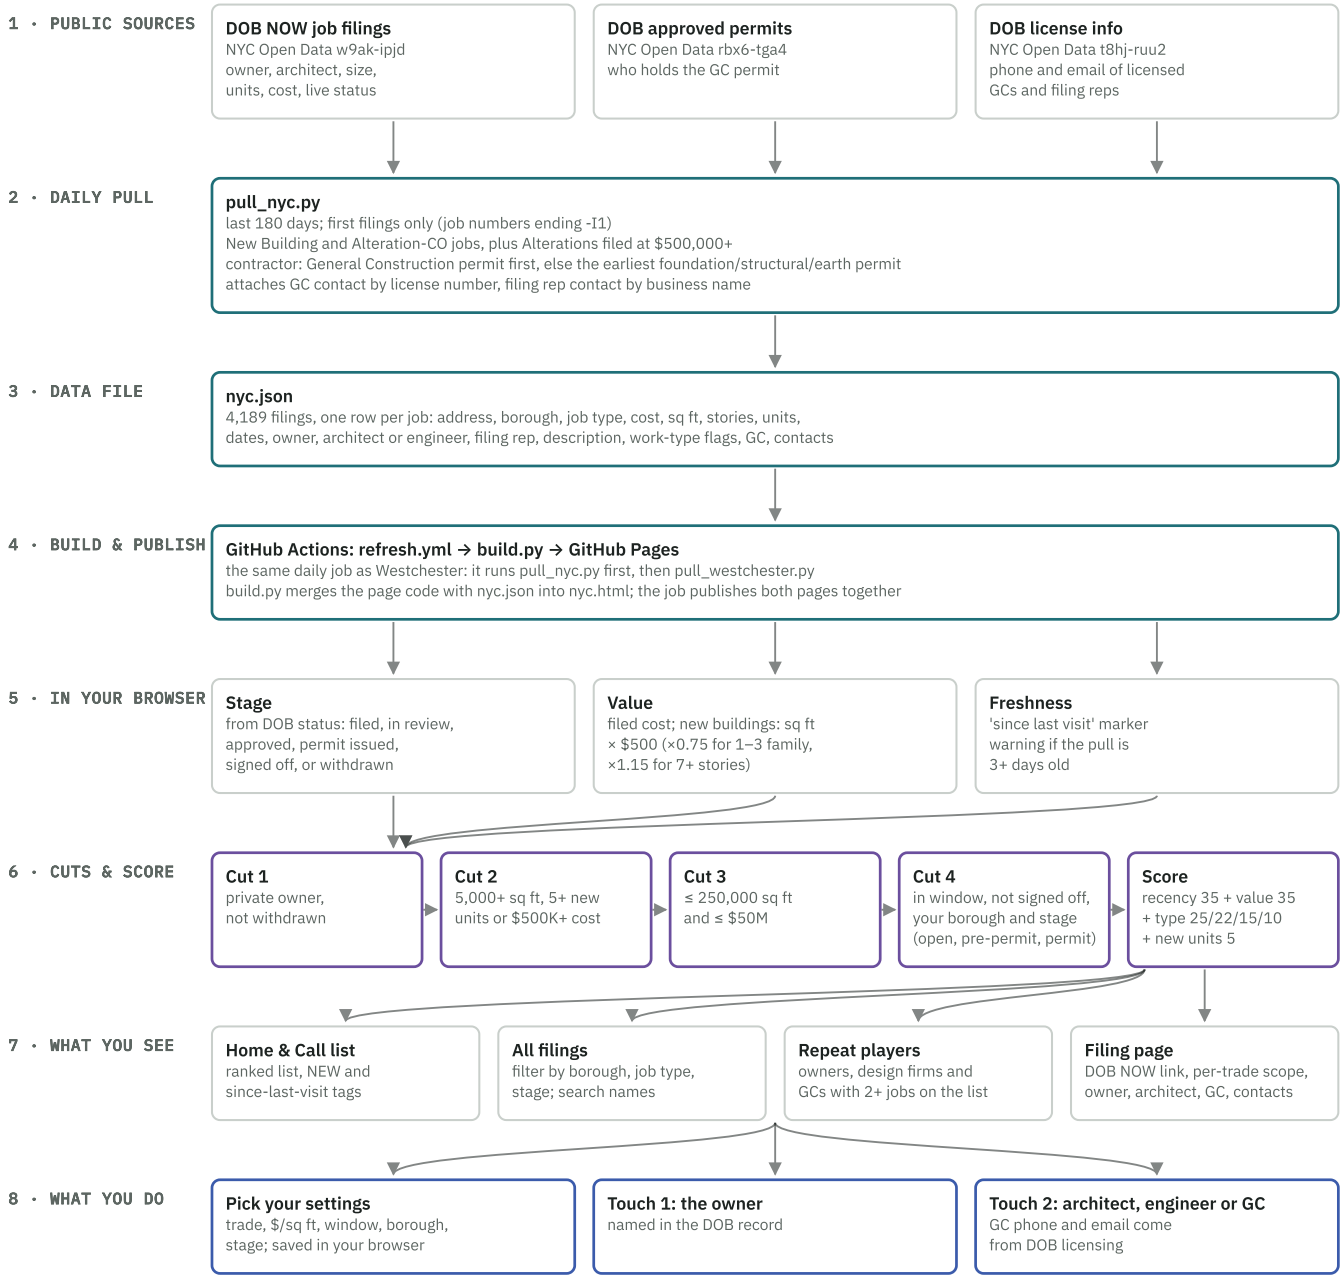

The project team (`team.json`) and town phones (`contacts.json`) are researched by hand. Town permit status is checked by hand on CitySquared in 7 towns.

IF A SOURCE IS DOWN

The daily job keeps going and publishes the Westchester data already saved in the repo. The next morning's run catches up.

New York City, five boroughs

Built from Department of Buildings filings, which name the owner and design professional from day one.

Three DOB datasets are joined in one daily pull into a single file. The browser works out each filing's stage and value, cuts the list and scores it.

JOINING THE DATASETS

Permits and filings share the job number. Contractor contacts match on license number; filing-rep contacts match on business name.

WHAT'S MISSING

Owners, architects and engineers have no public phone or email in DOB data. Only GCs and filing reps do.

STAGE IS LIVE

Unlike Westchester, every NYC filing carries its real DOB status, so the stage updates daily with no extra lookup.
